

Motivational Letter

Interest and passion are integral parts to a successful career. Likewise, a proper partner whose hand in hand walk to success is equally essential. With that being said, I would like to express my undying interest in studying at Lucerne University for a bachelors degree in sustainable energy systems.

I am currently an IT specialist with a wide array of expertise in this field. I have served in various departments handling different roles. These were operational and technical assistance coupled with apprenticeship in computer skills. These roles exposed me to a lot of expertise in the IT industry. However, with time I lost interest in this field. Reasons being, the query in my mind was always how I could make an impact both locally and internationally. In this state of lack of interest, I wanted to find a course that would not only rejuvenate my interests but also contribute to the multiple dimensions of the global scene. Hence, the opportunity to study at Lucern University where you offer the degree in sustainable energy systems was a dose of reverberation that came at an opportune time. Excitement and thirst for understanding the university and more importantly, the course was a perpetual desire.

In the course that you offer, flexibility, global recognition, multidimensionality and marketability are the quadruple aspects that made my optimism shift up. The small steps to international change and impact are a daunting task. However, with the course you offer, this becomes a light and somewhat achievable endeavor. Training in English, which is the primary language of communication has shown the international appreciation of this course. Secondly, the degree course offers a complete package to my interest in the global change. Change which is to ensure sustainability of the environment and energy sources that will meet the needs of the generations to come. The ecological, economical and social slices of this study will be fundamental in achieving my desire. Through the university, I will be able to communicate effectively and efficiently in the global arena of ecological sustainability. Added to this are the other factors that make this course you offer unparalleled and unrivaled. Firstly, this is a highly varied and flexible course. Engineering, business and language have are key trios that cement the foundation of this course.

Accordingly, my interests in these fields especially in engineering are evident. I have an advanced maturity in the various sciences. These are mathematics, physics and chemistry. These disciplines form a formidable team in engineering. Additionally, as per the description of this course, it is very flexible. It offers a student the opportunity to choose the various packages of the units or modules that he or she can take. Interdisciplinary partnership enables the use of some units of business, language, architecture. This will play a great role in ensuring that my career is very marketable and can play and easily succeed in

the international platform. Not forgetting the fact that the university offers wide sources of practicality. The laboratories that assist in various units such as thermal dynamics show that this is a course of change. Hence the theoretical aspect of this course intertwines with practice to make it a holistic degree.

I would thus like to be a part and parcel of the Lucern University in the path to change both in education and career. This cosmopolitan university that offers a convergence of different people for a united purpose is the best environment. Correspondingly, this will enable me to improve my language, offer a set of skills which are branded with marketability, practicality, recognition and flexibility. Therefore, I am confident that these factors and the experience in the university will be a fun and educational journey.

Thanks in advance for considering my request. With fun and enthusiasm, I look forward to your response.
